

HOW THEY DID IT

Creative Designs in Lighting used color-changing fixtures concealed in sculpted insets and terraces to illuminate the glass façade of a lakeside office complex and earn an **IES Illumination Award of Merit**.

1. During the day, clouds are reflected across the five buildings' fritted, mirror-like glass.
2. At night, pre-programmed linear RGBW fixtures illuminate the façade. Color schemes align with the blue marina, red tenant branding or seasonal holidays.
3. While the intensity of reflected light changes, a direct view of sources is obscured from most viewing angles and interior lights are visible from a distance.
